

**CollabraSpace®**  
Revolutionary Collaboration

## The Future? It's Collaborative

In today's accelerating world, the difference between success and failure can be seconds—the time it takes for critical data to be shared throughout your organization.

Organizations struggling to transform disconnected business operations with today's communication systems have had to rely on first-generation collaboration technologies, focusing on either bringing people together *or* sharing data.

That is, until now. At CollabraSpace®, we know the future is collaborative. That's why we've created a new generation of products that allow you and your organization to realize collaboration without compromise—robust, secure solutions that seamlessly integrate your people, processes, and data.

## The Consultative Edge

When you connect with CollabraSpace, you'll discover that behind our leading edge products are some of the leading collaboration specialists in technology today.

What's more, we're ready to collaborate with you on solving whatever workplace challenge you may currently face. As skilled engineers, consultants, and developers, we can guide your integration of CollabraSpace products and components to incorporate these capabilities seamlessly into your enterprise. In addition, we can even help you create new custom capabilities, with a rapid development schedule measured in **days**, not months.

## A New Standard Defined By Results

At CollabraSpace, we design with both your future and your ROI in mind. Built on our core platform CollabraSuite, our revolutionary products set a new standard for defining collaboration—and delivering measurable results.

What drives these dynamic solutions? Unlike proprietary "closed" systems, CollabraSpace products are designed to work effortlessly with your current applications and processes. Once deployed, they provide you with the capability to embed a powerful set of collaboration tools that link, literally, every point of your enterprise.

Thanks to an open, standards-based application architecture that's built on the industry-leading J2EE platform, our products can be easily customized to meet your specific needs. What's more, we provide an open API for faster configuration and customization with your existing systems. Our highly flexible functionality even extends to Web-based delivery of collaboration applications and support for all major OS vendors.

While collaboration environments open the door to accelerated communication, they can also leave you vulnerable to potential security breaches. That's why all CollabraSpace products are designed to work within the most secure enterprise environments.

All of our solutions are fully integrated with the J2EE security model for providing Identification, Authentication, and Authorization. Also included are full auditing and metrics reporting on all collaborative activity.

## Collaborate With A Leader

Today, only one technology leader offers you a single collaboration solution that integrates every aspect of your enterprise—people, processes, and data—within a dynamic real-time environment that is flexible, open, and secure.

Whatever your goal, from greater interdepartmental cooperation to the rapid development of large-scale data management solutions, CollabraSpace can help you achieve it, and more.

Tap into your true potential. Achieve extraordinary results. And experience collaboration without boundaries—with CollabraSpace.
