

We support multiple contracts in the Maryland, DC and VA area. Our projects are focused on Enterprise Application Development using the JEE platform.

Software Engineering Consulting

We are seeking candidates experienced with some applicable programming language such as JAVA, C++ or C, COBRA, J2EE, Perl, JavaScript, UNIX scripting languages; XML, HTML, workflow tools such as JBoss or Weblogic; DOM; AJAX; Apache; Spring, SOAP, Struts, Active X, near-real-time processing, collection systems, network protocols & standards, GUI development, and mission management systems.

Our projects use programming in Top Down, Event Driven, and object oriented paradigms.

Experience in Agile methods is desired.

System Architecture and Design

Candidates for these positions will provide system engineering support on large-scale systems, major system elements, and/or interfacing systems. Tasking includes overall system engineering expertise in the architecture, design, development, requirements analysis, data flow, network design and/or implementation or testing for the program. Opportunities will include the ability to develop detailed system Architecture and system design documentation. Guide system development and implementation planning through assessment or preparation of system engineering management plans and system integration and test plans. You may also be tasked with developing system configuration documentation, including detailed designs for capacity planning, security systems and disaster recovery.

Applicable skills include:

Solaris and Linux; Solaris, Linux, and Windows utilities and techniques to diagnose and correct performance bottlenecks.

Database Administration and Management

Looking for candidates with experience in: Tuning of database parameters, data profiling, communication with Systems DBA and deployment of database related code to non-development database. Responsibilities may include driving software design and development activity to defined milestones and deliverables while conforming to defined software development practices, processes and enterprise standards. Tasks may involve Collaboration, Communication and Integration with project team and other projects within the Development Organization. Other duties may include coordinating with external project resources, including requirements management, quality assurance, configuration management and Operations & Engineering as needed.
